

NUTRI FEEDS

Layer Feeds:

Egg production makes for consistent income and steady cash flow due to the nature of the laying cycle.

Well managed layer will pay themselves off very soon in the laying cycle and start making profit. In order to achieve good steady earnings from your layers it is imperative that one uses feeds of consistently good quality, and that the birds are kept well conditioned and healthy. To this end, Nutrifeds offers feeds that will help you achieve the goals and performance you should expect from your birds.

PRODUCT NAME	DESCRIPTION	FEEDING RECOMMENDATION
PULLET STARTER	Designed to give your day old pullets the foundation they need for a productive life	0 - 6 weeks

Broiler Feed Range:

When done correctly, growing broilers for the market can be a very profitable enterprise, and can supplement one's income greatly. Feed, as an input, makes up 65-70% of the total cost of production, and it is therefore important that one chooses a good quality feed, from a reputable supplier in order to maximize growth, efficiency and profit. Nutri Feeds draws on many years of experience and pioneering technology in order to produce a feed tailored to Zambian conditions. In short, we have the formula for your success!!

Nutri Range of Broiler Feed:

When you feel it's time to top up the game and seriously begin making money, when your experience as a broiler farmer urges you to take the next step, then the Nutri range of feeds will give you the edge few others have. High quality, high density, technically fine-tuned, when second best is not an option, the broiler feeds are what you have been looking for also available in Starter, Grower and Finisher.

Feeding Recommendation	Total g (grams) per bird
Starter	800g
Grower	1200g
Finisher	1200 - 1,500g
Total per bird	3,200 - 3,500g

Master Farmer Range:

This feed has been designed bearing the cost of feed in mind, yet are technically very sound. This range of feed will give you everything you need in order to maintain meaningful levels of growth and efficiency. Master farmer is available in crumbs and pellets. A great all-round feed, for producing quality broilers!!

Tips:

- Weigh your birds weekly
- For best results, feed only as directed.
- Make sure feed is fresh.
- Remember to order ahead of time so that your birds always have feed.

Pig Grower:

Nutrifeeds Pig Grower ration is designed as an all-round pig ration, it can be used as a grower or finisher ration, as well as a Lactation ration for Sows. As such it can be fed ad lib to pigs. All Nutrifeeds’ knowledge, knowhow and experience in combined to give you a product that is made up of the best raw materials available in Zambia formulated to work for you.

Have you considered the following points in your piggery?

These are some pointers that, if followed and managed, will result in better production and more profit.

PARAMETER	PURPOSE	TARGET
Pre-Weaning Mortality	One measures this as an indication of bio-security, sow milk level, creep temperature, general management efficacy.	The lower the better (less than 12%)
Weaning Weight	Ideally pigs should be weaned at 4 weeks. Weaning weights are affected by health and bio-security, amount of sow milk (sow nutrition), general management of piglets	The higher the better (more than 7.5KG at 4 weeks)
Feed Conversion Rate	This is the total amount of feed fed to the herd (sows, boars, piglets weaners, everything) versus the total weight of pork (Live Weight—LW) sent to market.	The lower the better (less than 4kg feed/kg LW)

Tips:

For best results, feed only as directed.

Make sure feed is fresh.

Remember to order ahead of time so that your animals always have feed.
